

## Capturing Offshore Insights

**The North Atlantic is a big place. We're making it a lot smaller by capturing the insights from Newfoundland and Labrador's (NL) offshore to help oil and gas explorers make informed business decisions.**

Through Insight, our web-based application, OilCo provides users free access to data that will help lower exploration barriers for offshore NL frontier basins.

Users can save time and money by processing data quickly and easily. With simple filters to analyze data sets, vast geological and weather data, core imagery and much more, Insight provides new ways to explore NL's offshore.

Bringing together information from multiple sources, studies, and reports on an interactive map, users can navigate and download multiple studies and hundreds of reports to meet their needs.

Take a deep dive with Insight and discover offshore NL's vast potential. [Learn more at insight.oilconl.com](https://insight.oilconl.com).

### INSIGHT AT A GLANCE

 2.3 million km<sup>2</sup>  
of metocean analysis

65+ years of offshore  
weather and sea state data

 850+ satellite scenes

112 exploration  
wells with analyzed data  
and drilling metrics

 7 resource assessments

23 mapped  
offshore basins

 700+  
downloadable reports

Digitally captured  
photos of drilling cuttings  
and core data

 Zero cost to the user
