

BULL ARM FABRICATION SITE

Strategically located world-class fabrication facility

Strategically located in Canada's most easterly province, Newfoundland and Labrador (NL), the Bull Arm Fabrication site (BAF) is close to international shipping lanes and oil and gas developments in the North Atlantic; and is closer to Europe than any comparable facility in North America.

When we say BIG, we mean it. BAF has:

- Over 23,000m² of covered workspace adjacent to deepwater berthages
- Unobstructed, deepwater access to the Atlantic Ocean
- 6,300 acres in three key areas: the Marine Facility, Fabrication Yard, and Deepwater Site

BAF leases all or portions of the site to industrial tenants for the execution of their project while managing common core site services.

Major projects can be performed from start to finish at this multi-user facility and, when ready, have direct unobstructed deepwater access for worldwide transport.

BAF features infrastructure to support simultaneous construction, maintenance, inspection, fabrication, load-out, assembly, manufacturing, and supply servicing activities. BAF also has the capacity and flexibility to accommodate multiple vessels and offshore installations.

BAF has played a significant role in developing NL's oil and gas industry, including hosting major portions of the Hibernia, Hebron, Terra Nova, and White Rose offshore projects.

Your big opportunity at BAF awaits.
